Alex Egan and Sethu Prakasam

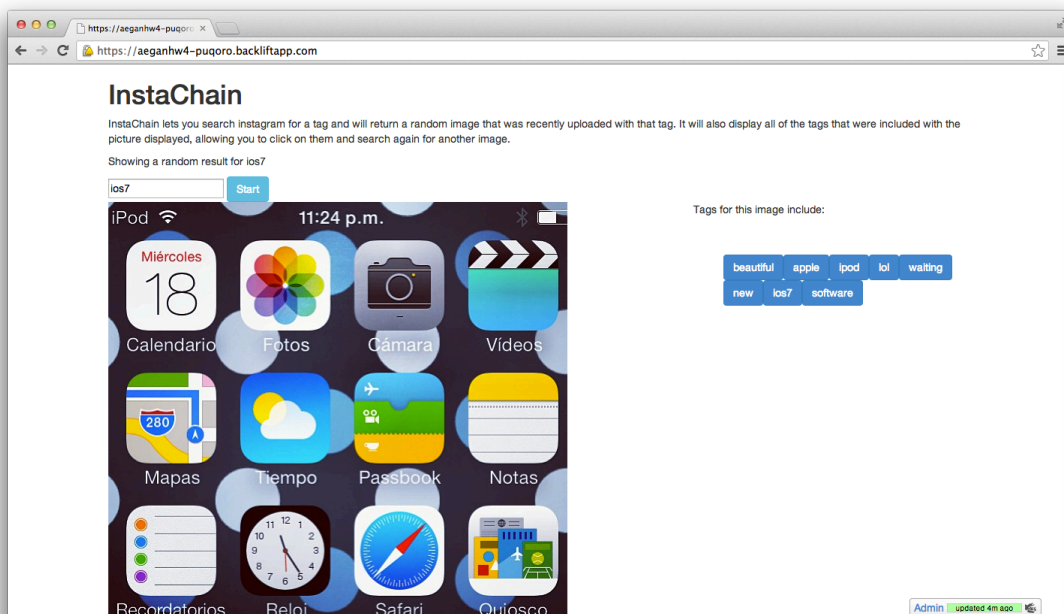

When first looking at the website, a user has the option of clicking for college information or playing the InstaChain game.

Clicking the college button makes an ajax call for a file located on the server and displays information it retrieves from the json file. It also creates buttons to style the table.

The InstaChain game works by entering a tag into the search box. For example, a user can type “iOS7”. This will make a call to the Instagram API for recent uploads tagged “iOS7”. It uses JSONP and the API URL https://api.instagram.com/v1/tags/{search term}/media/recent?client_id={instachain's client id}. It will then display a random picture, as well as other tags for that photo alongside it.

Clicking on a related tag will preform the same search on whatever tag the user clicks on. For example, clicking on software will result in the following:
